The majority of cases were symptomatic during their course of illness. *

The most common symptoms were fatigue, headache, and cough.

Known source of exposure has been identified for more than half of the cases.

1. 38 cases were associated with a named outbreak
2. Of those unassociated with an outbreak, 67 cases were household contacts meaning they are connected to another positive COVID-19 case within the same household.
3. Of those unassociated with an outbreak, 32 cases were a community contact meaning they are connected to another positive COVID-19 case not within the same household.
