Antrim County Beach Advisory Lifted

The Health Department of Northwest Michigan (HDNW) is lifting a partial body contact advisory for Banks Township Park in Antrim County. A water sample collected Monday showed an E. coli level of 1.0 per 100 milliliters (ml), which allows unrestricted use based on Michigan Department of Environment, Great Lakes, and Energy (EGLE) water quality standards. The previous posting at the beach has been removed.

Levels testing between 301 and 1,000 per 100 ml qualify for partial body contact advisories, based on EGLE standards. Levels below 300 per 100 ml allow for full body contact. The level at Banks Township Park advises no water contact above the waist. Wading, paddling, and fishing are considered safe.

Water sampling is done throughout the summer months to monitor E. coli levels at many public beaches. The levels change frequently, impacted by the presence of fowl, waves, and more. When a sample comes back that creates an advisory of any type, the water at that beach is sampled again the next day to keep the public updated.

HDNW posts beach monitoring reports weekly on its website at <https://www.nwhealth.org/beach.html>. Through an EGLE supported web-based program, the public has real-time access to beach water quality results for beaches all over Michigan. Information can be found at www.deq.state.mi.us/beach/.

###

HDNW is mandated by the Michigan Public Health Code to promote wellness, prevent disease, provide quality healthcare, address health problems of vulnerable populations, and protect the environment for the residents and visitors of Antrim, Charlevoix, Emmet, and Otsego counties.

Proud member of the [Northern Michigan Public Health Alliance](#): 7 local health departments advocating for public health.
